eKYC Portal for Hotel Check-ins: A Case Study

This case study delves into the development of a portal that enables individuals and organizations, particularly hotels, to complete the eKYC (electronic Know Your Customer) process for guests checking into hotel rooms.

Company Overview

The client is a technology company looking to streamline the guest check-in process for hotels. They sought to create a secure and efficient eKYC portal that would simplify the verification process for both guests and hotels.

Challenges

• Ensuring compliance with legal and regulatory requirements for eKYC verification.

Solution Offered

- Invimatic developed a secure webbased portal that allowed individuals and organizations to complete the eKYC process for hotel check-ins. The
- Integrating the portal with existing hotel management systems for seamless check-in processes.
- Designing a user-friendly interface that would simplify the eKYC process for guests and hotel staff.

portal featured a user-friendly interface where guests could upload their identification documents and complete the verification process online. Hotels could then access the verified information and facilitate a smooth check-in process for guests.
